JOYSTICK[®] for **LAPAROSCOPIC PORT CLOSURE**

Faster, Simpler & More Secure

1

1. Easy Grip Head

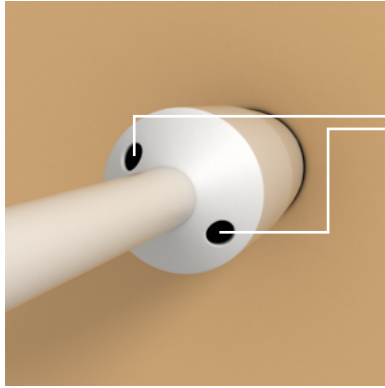

2

2. Extended Handle

3. Unique Conical Shape

3

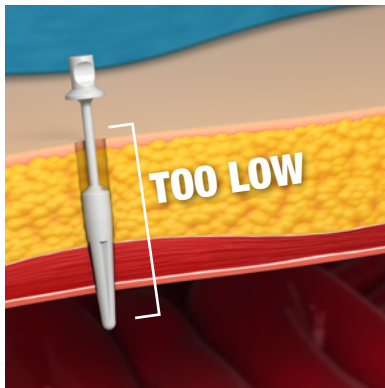

PORT OPENING EASILY VISIBLE

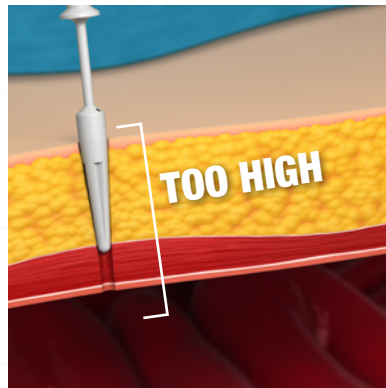

The Joystick's raised handle provides an open field of view for the surgeon and makes inadvertent suturing of the dermis a thing of the past.

Artisan's Joystick allows surgeons to close laparoscopic port closure sites in a way that is faster, safer, and more secure.

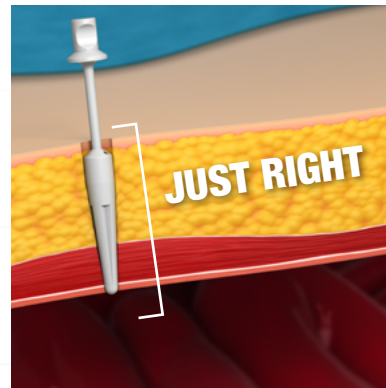

VERSATILITY FOR ANY DEPTH

TOO LOW

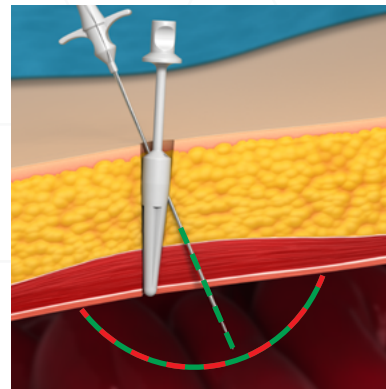

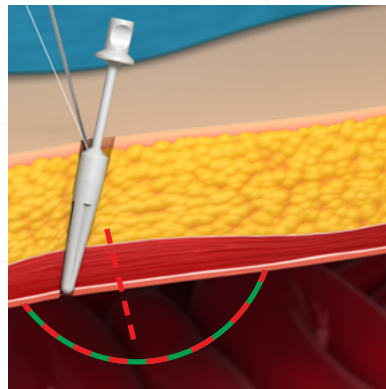

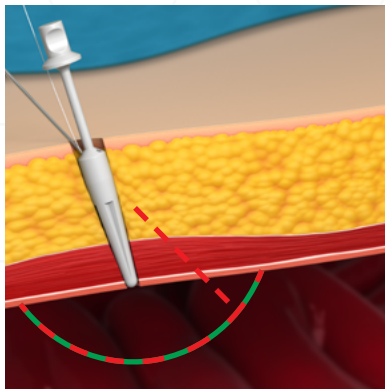

TOO HIGH

JUST RIGHT

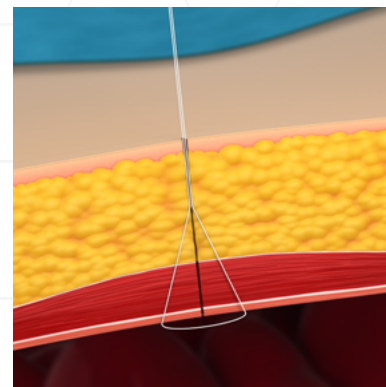

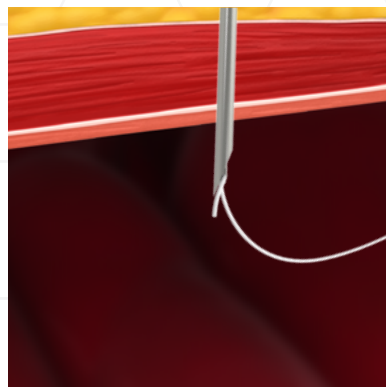

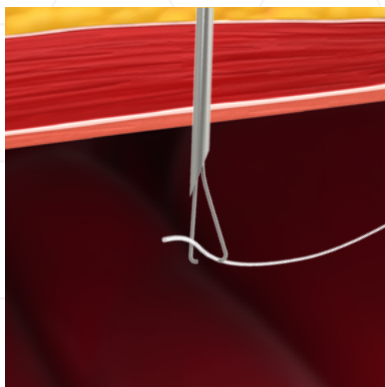

The uniquely designed handle and conical shape allows the surgeon to sink the Joystick to the appropriate insertion point.

FIND OPTIMAL ANGLE

Once proper depth is established the surgeon can then take advantage of the Joystick's versatility by selecting the optimal angle for secure capture of the fascia, no longer forcing the surgeon into a predetermined one-size-fits-all angle.

EASY AND QUICK SUTURE RETRIEVAL

The Joystick's maneuverability allows for quick retrieval of the suture saving time and the need for added personnel.

Artisan Medical's Joystick puts control back into the hands of the skilled surgeon. The Joystick's flexibility brings the surgeon's knowledge, skills and experience to the forefront of laparoscopic fascial closure. It solves many issues surgeon's face when attempting complete fascial closure.

Patent Pending

Part #JOY-500
